Master of Music
DePaul University

Bachelor of Arts
University of California,
Los Angeles (UCLA)

ABOUT ME

I'm a front end developer based in Chicago with a background in classical music and nonprofit management. During the pandemic, I discovered my passion for web development and have spent the past thirteen months honing my programming skills and learning new technologies. Coding nearly every day for a year and loving every second of it made me realize that this is what I want to do—so I've decided to take the leap to pursue a career in tech.

The parallels between music and programming are undeniable. As a professional clarinetist, I have performed with world-class ensembles, including the Chicago Symphony Orchestra and the Joffrey Ballet. Being able to constantly perform at the highest level, under immense pressure, has equipped me with qualities that are essential for a successful software developer:

- Strengths in analyzing problems and solving them methodically in a timely manner
- Self-discipline, drive, and willpower to achieve above and beyond goals
- Desire to constantly learn and grow
- Ability to work independently, as well as in a team setting

It has been an incredible journey so far, and I am truly excited to leverage my programming skills and apply my web development knowledge to build amazing products. If you'd like to learn more about me, please don't hesitate to contact me!

EXPERIENCE

Da Capo Music | e-Commerce website | https://dacapomusic.net

A multi-page e-Commerce website for musical accessories and instruments. Built with JavaScript, Bootstrap, and CSS. Linked to PayPal Commerce Platform for secure and smooth checkout. Accepts various payment options: credit and debit card, PayPal, Venmo, *buy now pay later*.

Breezee Weather App | Web-based weather application | https://breezee.live

Global weather application to access current conditions and 15-hour forecasts. Data are imported through Open Weather Map's One Call API. App is powered by JavaScript, and the design is inspired by Neumorphism.

Adia DJ Violin | Band website | https://adiachicago.live/

Official Webpage for recording-artist Adia. Styled with Bootstrap and CSS. Hero section features an auto-carousel of action images, with previous/next buttons.

Daniel Won Portfolio | Personal website | https://danielwon.dev/

Fully responsive portfolio site with focus on user interface (UI) and user experience (UX). Built from scratch with JavaScript, CSS3 and HTML5.
